                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   -5 (IL-5) signal transduction. The antisense compound is an antisense oligonucleotide targeted to a nucleic acid molecule encoding a mammalian IL-5 or IL-5 receptor a, where the antisense compound modulates the expression of mammalian IL-5 or IL-5 receptor a. The antisense oligonucleotide comprises at least one modified internucleoside linkage,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to an antisense compound that modulates interleukin -5 (IL-5) signal transduction. The antisense compound is an antisense

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC i.e. a phosphorothicate linkage, or a peptide nucleic acid, at least one condified sugar moiety, i.e. a 2'-O-methoxyethyl sugar moiety, and at condified sugar moiety, i.e. a 2'-O-methoxyethyl sugar moiety, and at condified sugar moiety, and at condified nucleobase, i.e. 5-methylcytosine. Altering the ratio cof the isoforms of mammalian IL-5 receptor a in mammalian cells or compound so that the ratio of the mammalian IL-5 receptor a isoforms is compound so that the ratio of the mammalian IL-5 receptor a isoforms is condition or IL-5 or IL-5 signal transduction or IL-5 or IL-5 receptor a expression, or a condition characterised by a reduction in apoptosis comprises compound so that IL-5 signal transduction, II-5 or IL-5 creceptor a expression, or a condition service sometimes of an integer compound so that II-5 receptor a prophylactic amount of an antisense compound so that II-5 receptor a is modulated. The antisense compounds, methods and compositions are cuseful in promoting apoptosis and in treating eosinophilic syndrome and conjouncleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

```
The invention relates to an antisense compound that modulates interleukin CC -5 (II-5) signal transduction. The antisense compound is an antisense coligonucleotide targeted to a nucleic acid molecule encoding a mammalian CC II-5 or II-5 receptor a, where the antisense compound modulates the CC expression of mammalian II-5 or II-5 receptor a. The antisense coligonucleotide comprises at least one modified internucleoside linkage, i.e. a phosphorothioate linkage, or a peptide nucleic acid, at least one modified sugar moiety, i.e. a 2'-0-methoxyethyl sugar moiety, and at CC least one modified nucleobase, i.e. 5-methylytosine. Altering the ratio CC of the isoforms of mammalian II-5 receptor a in mammalian cells or tissues with an antisense compound so that the ratio of the mammalian II-5 receptor a isoforms is altered. Treating a mammal having a disease or condition associated with CII-5 signal transduction or II-5 or II-5 receptor a expression, or a captisense compound so that II-5 signal transduction in apoptosis comprises administering to the mammal a therapeutic or prophylactic amount of an antisense compound so that II-5 signal transduction, II-5 or receptor a expression, or a therapeutic or prophylactic amount of an antisense compound so that II-5 signal transduction, II-5 or II-5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New antisense compound modulating useful in promoting apoptosis and

Human interleukin-5 (IL-5) DNA antisense oligonucleotide #10

23-SEP-2004

(first entry)

26-MAR-1999; 17-MAR-2000; 07-MAR-2001; 06-OCT-2003; US2004121376-A1 sapiens. 99US-00280799. 2000WO-US007318. 2001US-00800629. 2003US-00679532.

```
oligonucleotide targeted to a nucleic acid molecule encoding a mammalian CC II-5 or II-5 receptor a, where the antisense compound modulates the CC expression of mammalian II-5 or II-5 receptor a. The antisense compound modulates the CC oligonucleotide comprises at least one modified internucleoside linkage, or a peptide nucleic acid, at least one modified sugar moiety, i.e. a 2'-0-methoxyethyl sugar moiety, and at CC least one modified nucleobase, i.e. 5-methylcytosine. Altering the ratio of the isoforms of mammalian II-5 receptor a in mammalian cells or cissues comprises contacting the cells or tissues with an antisense CC altered. Treating a mammal having a disease or condition associated with II-5 signal transduction or II-5 or II-5 receptor a isoforms is altered by a reduction in approprise comprises administering to the mammal a therapeutic or prophylactic amount of an antisense compound so that II-5 signal transduction, II-5 or II-5 ceceptor a isoforms is altered, or expression of membrane II-5 or II-5 ceceptor a isoforms is altered, or expression of membrane II-5 or II-5 ceceptor a isoforms is altered, or expression of membrane II-5 or II-5 ceceptor a isoforms is altered, or expression of membrane II-5 receptor a is modulated. The antisense compounds, methods and compositions are useful in promoting apoptosis and in treating eosinophilic syndrome and coligonucleotide of the invention.

CC i.e. a phosphorothicate linkage, or a peptide nucleic acid, at least one modified sugar molety, i.e. a 2'-O-methoxyethyl sugar molety, and at cleast one modified nucleobase, i.e. 5-methylcytosine. Altering the ratio of the isoforms of mammalian IL-5 receptor a in mammalian cells or clisuses comprises contacting the cells or tissues with an antisense compound so that the ratio of the mammalian IL-5 receptor a isoforms is altered. Treating a mammal having a disease or condition associated with coll-5 signal transduction or IL-5 or IL-5 receptor a expression, or a condition characterised by a reduction in apoptosis comprises administering to the mammal a therapeutic or prophylactic amount of an artisense compound so that IL-5 signal transduction, IL-5 or IL-5 creceptor a isoforms is altered, or expression of membrane IL-5 receptor a isodulated. The antisense compounds, methods and compositions are cuseful in promoting apoptosis and in treating eosinophilic syndrome and continuation of the invention.

CC oligonucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          26-MAR-1999;

                                                                                                                                                                                                                                                                                                                                                            -5 (II-5) signal transduction. The antisense compound is an antisense oligonucleotide targeted to a nucleic acid molecule encoding a mammalian II-5 or II-5 receptor a, where the antisense compound modulates the expression of mammalian II-5 or II-5 receptor a. The antisense conjugates at least one modified internucleoside linkage, oligonucleotide comprises at least one modified internucleoside linkage,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (DEAN/)

                                                                                                                                                                                                                                                                                                                                                              Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CC IL-5 or IL-5 receptor a, where the antiense compound modulates the expression of mammalian IL-5 or IL-5 receptor a. The antisense CC oligonucleotide comprises at least one modified internucleoside linkage, i.e. a phosphorothicate linkage, or a peptide nucleic acid, at least one modified sugar moiety, i.e. a 2'.O-methoxyethyl sugar moiety, and at CC least one modified nucleobase, i.e. 5-methylcytosine. Altering the ratio of the isoforms of mammalian IL-5 receptor a in mammalian cells or tissues comprises contacting the cells or tissues with an antisense compound so that the ratio of the mammalian IL-5 receptor a isoforms is CC altered. Treating a mammal having a disease or condition associated with CC IL-5 signal transduction or IL-5 or IL-5 receptor a expression, or a CC disease or condition characterised by a reduction in apoptosis comprises CC administering to the mammal a therapeutic or prophylactic amount of an CC creceptor a expression, or IL-5 signal transduction, IL-5 or IL-5 or IL-5 or creceptor a expression, or IL-5 signal transduction, IL-5 or IL-5 or creceptor a expression, or IL-5 signal transduction, IL-5 or IL-5 or creceptor a expression, or IL-5 seceptor a signal transduction of IL-5 or creceptor a stoforms is altered, or expression of membrane IL-5 receptor a is modulated. The antisense compounds, methods and compositions are CC useful in promoting apoptosis and in treating eosinophilic syndrome and CC oligonucleotide of the inversions
                                                                                                                                                                                                                                                                                                                                                                                                   Best Loc

The antisense compound is an a coligonucleotide targeted to a nucleic acid molecule encoding IL-5 or IL-5 receptor a, where the antisense common and the coligonucleotide is a coligonucleotide.

The invention relates to an antisense compound that modulates interleukin CC -5 (II-5) signal transduction. The antisense compound is an antisense CC oligonucleotide targeted to a nucleic acid molecule encoding a mammalian CC II-5 or II-5 receptor a, where the antisense compound modulates the CC expression of mammalian II-5 or II-5 receptor a. The antisense CC oligonucleotide comprises at least one modified internucleoside linkage, i.e. a phosphorothioate linkage, or a peptide nucleic acid, at least one modified sugar moiety, i.e. a 2'-0-methoxyethyl sugar moiety, and at CC least one modified nucleobase, i.e. 5-methylcytosine. Altering the ratio of the isoforms of mammalian II-5 receptor a in mammalian cells or cissues comprises contacting the cells or tissues with an antisense compound so that the ratio of the mammalian II-5 receptor a isoforms is CC altered. Treating a mammal having a disease or condition associated with CC II-5 signal transduction or II-5 or II-5 receptor a expression, or a compound so that II-5 signal transduction in apoptosis comprises administering to the mammal a therapeutic or prophylactic amount of an antisense compound so that II-5 signal transduction, II-5 or II-5 creceptor a isoforms is altered, or expression of membrane II-5 receptor a isoforms is altered, or expression of membrane II-5 receptor a isoforms is altered, or expression of membrane II-5 receptor a isoforms is altered, and in treating cosinophilic syndrome and collisions are compounds, methods and compositions are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         26-MAR-1999;

The antisense compound is an antisense compound modulates the compound is an antisense compound modulates the compound is an antisense conformation in the antisense conformation is a 2'-0-methoxyethyl sugar moiety, and at compound modified mucleobase, i.e. 5-methylcytosine. Altering the ratio of the isoforms of mammalian II-5 receptor a in mammalian cells or tissues with an antisense compound so that the ratio of the mammalian II-5 receptor a isoforms is altered. Treating a mammal having a disease or condition associated with compound so that the ratio of the mammalian II-5 receptor a isoforms is conformed in the antisense compound so that iI-5 or II-5 receptor a expression, or a condition associated with considering to the mammal and the raceptor a expression, or a condition characterised by a reduction, in apoptosis comprises administering to the mammal a therapeutic or prophylactic amount of an antisense compound so that II-5 signal transduction, II-5 or II-5 cor II-5 receptor a is modulated, the ratio of II-5 is modulated. The antisense compounds, methods and compositions are constant as altered, or expression of membrane II-5 receptor a standard compositions are constant and in treating eosinophilic syndrome and conjouncleotide of the invention.
                                                                                                                                                                                             ş
                                                                                                                                                                                                                                                                                                              밁

                                                                                                                                                                             The invention relates to an antisense compound that modulates interleukin CC -5 (IL-5) signal transduction. The antisense compound is an antisense CC oligonucleotide targeted to a nucleic acid molecule encoding a mammalian CC IL-5 or IL-5 receptor a, where the antisense compound modulates the CC expression of mammalian IL-5 or IL-5 receptor a. The antisense compound modulates the CC oligonucleotide comprises at least one modified internucleoside linkage, i.e. a phosphorothioate linkage, or a peptide nucleic acid, at least one modified sugar moiety, i.e. a 2'-0-methoxyethyl sugar moiety, and at CC least one modified nucleobase, i.e. 5-methylcytosine. Altering the ratio of the isoforms of mammalian IL-5 receptor a in mammalian cells or tissues comprises contacting the cells or tissues with an antisense compound so that the ratio of the mammalian IL-5 receptor a isoforms is altered. Treating a mammal having a disease or condition associated with CC adisease or condition characterised by a reduction in apoptosis comprises administering to the mammal a therapeutic or prophylactic amount of an antisense compound so that IL-5 signal transduction, IL-5 or IL-5 creceptor a isoforms is altered, or expression of membrane IL-5 receptor a isoforms is altered, or expression of membrane IL-5 receptor a isoforms is altered, or expression of membrane IL-5 receptor a isoforms is altered, and in treating eosinophilic syndrome and collisions are compounded, methods and compositions are collisions are compounded to the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                i.e. a phosphorothicate linkage, or a peptide nucleic acid, at least one modified sugar moiety, i.e. a 2'.O-methoxyethyl sugar moiety, and at least one modified nucleobase, i.e. 5-methyloytosine. Altering the ratio of the isoforms of mammalian II-5 receptor a in mammalian cells or tissues comprises contacting the cells or tissues with an antisense compound so that the ratio of the mammalian II-5 receptor a isoforms is altered. Treating a mammal having a disease or condition associated with II-5 signal transduction or II-5 or II-5 receptor a expression, or a disease or condition characterised by a reduction in apoptosis comprises administering to the mammal a therapeutic or prophylactic amount of an antisense compound so that II-5 signal transduction, II-5 or II-5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         -5 (IL-5) signal transduction. The antisense compound is an antisense oligonucleotide targeted to a nucleic acid molecule encoding a mammaliar IL-5 or IL-5 receptor a, where the antisense compound modulates the expression of mammalian IL-5 or IL-5 receptor a. The antisense compound compound modulates the expression of mammalian IL-5 or IL-5 receptor a. The antisense oligonucleotide comprises at least one modified internucleoside linkage, the state of the s

The invention relates to an antisense compound that modulates interleukin CC -5 (IL-5) signal transduction. The antisense compound is an antisense CC oligonucleotide targeted to a nucleic acid molecule encoding a mammalian CC IL-5 or IL-5 receptor a, where the antisense compound modulates the CC expression of mammalian IL-5 or IL-5 receptor a. The antisense CC oligonucleotide comprises at least one modified internucleoside linkage, i.e. a phosphorothioate linkage, or a peptide nucleic acid, at least one CC modified sugar moiety, i.e. a 2'-0-methoxyethyl sugar moiety, and at CC least one modified nucleobase, i.e. 5 methylcytosine. Altering the ratio of the isoforms of mammalian IL-5 receptor a in mammalian cells or CC tissues comprises contacting the cells or tissues with an antisense CC compound so that the ratio of the mammalian IL-5 receptor a isoforms is CC altered. Treating a mammal having a disease or condition associated with CC IL-5 signal transduction or IL-5 or IL-5 receptor a expression, or a CC disease or condition characterised by a reduction in apoptosis comprises CC antisense compound so that IL-5 signal transduction, IL-5 or IL-5 creeptor a expression, or IL-5 or IL-5 signal transduction, IL-5 or IL-5 creeptor a isoforms is altered, or expression of membrane IL-5 receptor a isoforms is altered, or expression of membrane IL-5 receptor a isoforms is altered, or expression of membrane IL-5 receptor a isoforms are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    IL-5 receptor a, phosphorothicate;

New antisense compound Ħ promoting und modulating apoptosis and interleukin-5 signal transduction, in treating eosinophilic syndrome or

Example 20; SEQ ID NO 40; 77pp; English.

CC -5 (II-5) signal transduction. The antisense compound is an antisense coligonucleotide targeted to a nucleic acid molecule encoding a mammalian CC II-5 or II-5 receptor a, where the antisense compound modulates the CC expression of mammalian II-5 or II-5 receptor a. The antisense compound coule the CC expression of mammalian II-5 or II-5 receptor a. The antisense compound modulates the CC i.e. a phosphorothicate linkage, or a peptide nucleic acid, at least one modified sugar moiety, i.e. a 2'-0-methoxyethyl sugar moiety, and at least one cC i.e. senethyloytosine. Altering the ratio of the isoforms of mammalian II-5 receptor a in mammalian cells or tissues comprises contacting the cells or tissues with an antisense CC compound so that the ratio of the mammalian II-5 receptor a isoforms is altered. Treating a mammal having a disease or condition characterised by a reduction in apoptosis comprises administering to the mammal at therapeutic or prophylactic amount of an CC antisense compound so that II-5 seceptor a is modulated, the ratio of II-5 receptor a isoforms is altered, or expression of membrane II-5 receptor a isoforms is altered, or expression of membrane II-5 receptor a mathian II-5 receptor a sexpression of II-5 receptor a isoforms is altered, or expression of membrane II-5 receptor a mathian II-5 receptor a mathian and commonstitions are those second to mathian and commonstitions are the compound to the mathian and commonstition of III-5 receptor a mathian II-5 receptor a mathian III-5 recepto oligonucleotide The invention relates to an modulated. The antisense compounds, methods and compositions are stul in promoting apoptosis and in treating eosinophilic syndrome and thus. This sequence represents a human IL-5 DNA antisense invention. antisense compound that modulates interleukin

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                S
CC oligonuclectide targeted to a nucleic acid molecule encoding a mammalian CC II-5 or II-5 receptor a, where the antisense compound modulates the CC expression of mammalian II-5 or II-5 receptor a. The antisense CC oligonuclectide comprises at least one modified internucleoside linkage, CC i.e. a phosphorothicate linkage, or a peptide nucleic acid, at least one modified sugar moiety, i.e. 3'-0-methoxyethyl sugar moiety, and at cC least one modified nucleobase, i.e. 5-methylcytosine. Altering the ratio CC of the isoforms of mammalian II-5 receptor a in mammalian cells or tissues comprises contacting the cells or tissues with an antisense CC compound so that the ratio of the mammalian II-5 receptor a isoforms is CC altered. Treating a mammal having a disease or condition sesociated with CC II-5 signal transduction of II-5 or II-5 receptor a expression, or a CC disease or condition characterised by a reduction in apoptosis comprises CC administering to the mammal a therapeutic or prophylactic amount of an CC antisense compounds of that II-5 signal transduction, II-5 or II-5 or II-5 or CC receptor a isoforms is altered, or expression of membrane II-5 receptor a isoforms is altered, or expression of membrane II-5 receptor a septor a isoforms is altered, or expression of membrane II-5 receptor a septor a isoforms is altered, or expression of membrane II-5 receptor a septor a isoforms is altered, or expression of membrane II-5 receptor a septor a isoforms is altered, or expression of membrane II-5 receptor a septor a septo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     RESULT 176
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     8
          CC -5 (II-5) signal transduction. The antisense compound is an antisense coligonucleotide targeted to a nucleic acid molecule encoding a mammalian CC II-5 receptor a, where the antisense compound modulates the Expression of mammalian II-5 or II-5 receptor a. The antisense compound modulates the CC expression of mammalian II-5 or II-5 receptor a. The antisense coligonucleotide comprises at least one modified internucleoside linkage, or a peptide nucleic acid, at least one modified sugar moiety, i.e. a 2'-0-methoxyethyl sugar moiety, and at CC least one modified nucleobase, i.e. 5-methylcytosine. Altering the ratio CC of the isoforms of mammalian II-5 receptor a in mammalian cells or tissues comprises contacting the cells or tissues with an antisense CC compound so that the ratio of the mammalian II-5 receptor a isoforms is altered. Treating a mammal having a disease or condition associated with CI-5 signal transduction or II-5 or II-5 receptor a expression, or a CC contisted of the mammal a therapeutic or prophylactic amount of an contistering to the mammal a therapeutic prophylactic amount of an contistering to the II-5 signal transduction. II-5 or II-5 or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

The invention relates to an antisense compound that modulates interleukin -5 (IL-5) signal transduction. The antisense compound is an antisense oligonucleotide targeted to a nucleic acid molecule encoding a mammalian IL-5 or IL-5 receptor a, where the antisense compound modulates the expression of mammalian IL-5 or IL-5 receptor a. The antisense oligonucleotide comprises at least one modified internucleoside linkage, i.e. a physical properties at least one modified sugar molety, i.e. a 2'-O-methoxytethyl sugar molety, and at least one modified nucleobase, i.e. 5-methylcytosine. Altering the ratio of the isoforms of mammalian IL-5 receptor a in mammalian cells or tissues compound so that the ratio of the mammalian II-5 receptor a isoforms is altered. Treating a mammal having a disease or condition associated with IL-5 signal transduction or IL-5 or IL-5 receptor a expression, or a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             receptor a isoforms is altered, or expression of membrane IL-5 receptor a is modulated. The antisense compounds, methods and compositions are useful in promoting apoptosis and in treating eosinophilic syndrome and asthma. This sequence represents a human IL-5 DNA antisense oligonucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; interleukin-5; IL-5; ss; antisense oligonucleotide; IL-5 receptor a; phosphorothioate; 2'-O-methoxyethyl sugar 5-methylcytosine; IL-5 signal transduction; apoptosis; eosinophilic syndrome; asthma; antiasthmatic; cytostatic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence

5 (IL-5) signal transduction. The antisense compound is an antisense oligonucleotide targeted to a nucleic acid molecule encoding a mammalian IL-5 or IL-5 receptor a, where the antisense compound modulates the expression of mammalian IL-5 or IL-5 receptor a. The antisense oligonucleotide comprises at least one modified internucleoside linkage, or a peptide nucleic acid, at least one modified sugar moiety, i.e. a 2'.O-methoxyethyl sugar moiety, and at least one modified nucleobase, i.e. 5-methylcytosine. Altering the ratio of the isoforms of mammalian IL-5 receptor a in mammalian cells or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                disease or condition characterised by a reduction in apoptosis comprises administering to the mammal a therapeutic or prophylactic amount of an antisense compound so that II-5 signal transduction, II-5 or II-5 receptor a expression, or II-5 receptor a is modulated, the ratio of II-5 receptor a isoforms is altered, or expression of membrane II-5 receptor a is modulated. The antisense compounds, methods and compositions are useful in promoting apoptosis and in treating essinophilic syndrome and asthma. This sequence represents a human II-5 DNA antisense oligonucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; interleukin-5; IL-5; ss; antisense IL-5 receptor a; phosphorothioate; 2'-O-mu 5-methylcytosine; IL-5 signal transduction
                                                                                                                                                                                                                                                                                                                            New antisense compound

.. 0 u, invention

The present invention relates to phytochrome 10 and its coding sequence (see AN48097 and AN64233). The phytochrome and its coding sequence are useful in the diagnosis and treatment of malignant tumour, haemopathy, HIV infection, immunological diseases and various inflammations. The present sequence is a PCR primer, which was used in an example from the

Phytochrome 10 and encoded polynucleotide, applicable in treatment of malignant tumor, hemopathy, HIV infection, i diseases and various inflammation.

Treating a mammal having a disease or condition associated with II-5 signal transduction or II-5 or II-5 receptor a expression, or a disease or condition characterised by a reduction in apoptosis comprises administering to the mammal a therapeutic or prophylactic amount of an antisense compound so that II-5 signal transduction, II-5 or II-5 receptor a expression, or II-5 receptor a expression, or II-5 receptor a is modulated, the ratio of II-5 receptor a isoforms is altered, or expression of membrane II-5 receptor a is modulated. The antisense compounds, methods and compositions are useful in promoting apoptosis and in treating eosinophilic syndrome and asthma. This sequence represents a human II-5 DNA antisense
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    tissues comprises concucu

                                                                                                                        The invention relates to a system for detecting gene expression, which comprises one or two isolated DNA molecules that detect expression of a gene, where the gene corresponds to any of 8143 oligonucleotides (ABZ00010-ABZ08152) each having 50 base pairs (bp). The system is useful for leukocyte expression profiling. It is particularly useful for diagnosing a disease, monitoring (rate of) progression of a disease, predicting therapeutic outcome, determining prognosis for a patient, predicting disease complications in an individual or monitoring response to treatment in an individual. The diseases include cardiac allograft rejection, kidney allograft rejection, liver allograft rejection, atherosclerosis, congestive heart failure, systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis or cytomegalovirus infertica
                                                                                                                                                                                                                                                                                                   Claim 1;
                                                                                                                                                                                                                                                                                                                          New system for leukocyte expression profiling, diagnosing a disease, or monitoring (the rate of) progression of a disease, e.g. atherosclerosis or congestive heart failure, comprises diagnostic oligonucleotides.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a system for detecting gene expression, which comprises one or two isolated DNA molecules that detect expression of a gene, where the gene corresponds to any of 8143 oligonucleotides (ABZ00010-ABZ08152) each having 50 base pairs (bp). The system is useful for leukocyte expression profiling. It is particularly useful for diagnosing a disease, monitoring (rate of) progression of a disease, predicting therapeutic outcome, determining prognosis for a patient, predicting disease complications in an individual or monitoring response to treatment in an individual. The diseases include cardiac allograft rejection, kidney allograft rejection, liver allograft rejection, atherosclerosis, congestive heart failure, systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis or cytomegalovirus infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New system for leukocyte expression profiling, diagnosing a disease, or monitoring (the rate of) progression of a disease, e.g. atherosclerosis or congestive heart failure, comprises diagnostic oligonucleotides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 50
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 1; Page 390;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This invention relates to novel methods for diagnosing and monitoring CC autoimmune and chronic inflammatory diseases. Specifically, it refers to CC the identification of genes that have a clinical utility as diagnostic CC tools for the management of, in particular, patients with systemic lupus CC erythematosis (SLE) or rheumatoid arthritis (RA). Accordingly, the CC present invention describes a method for determining the levels of CC multiple differentially expressed genes of a patient, in a concerted CC manner, in order to achieve an improved diagnostic assay with sensitivity CC and specificity for the disease in question. As such, these genes are CC useful for the diagnosis of various other inflammatory disorders CC including cholecystitis, Sjogren's disease, CREST syndrome, sclerosing cholangitis, suppendicitis, ulcerative collitis, primary sclerosing CC cholangitis, appendicitis, diverticulitis, and primary biliary sclerosis. This oligonucleotide is a human DNA probe used to monitor the expression ccc level of the differentially expressed diagnostic genes of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

The present sequence is an antisense oligonucleotide HUMILISAS4 specific for the human ILS. The method can be used to treat airway diseases such as cystic fibrosis, asthma, chronic obstructive pulmonary diseases, bronchitis and other airway diseases characterised by an inflammatory response. By eliminating adenosine from the antisense ON, its liberation upon antisense degradation is prevented, thereby preventing adenosine-induced bronchoconstriction in patients with hyper-

The present invention describes a new composition comprising an antisense coligonuclectide (ON) with low adenosine (up to 15%), which targets cure nucleic acids involved in bronchoconstriction, allergies, and/or continuation. The ON can have antiinflammatory, antiallergie, and/or cure useful for the treatment of diseases associated with inflammation. CC impaired airways, including lung disease and diseases whose secondary effects afflict the lungs of a subject. They can be used for treating e.g. ischaemic conditions, pulmonary vasoconstriction, allergies, asthma, cimpded respiration, respiratory distress syndrome, pain, cystic fibrosis, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease (COPD), and cancers such as leukaemias, lymphomas, carcinomas, and cancers which may metastasise to the lungs, including breast and prostate cancer. The reduction of the adenosine content of the ONS reduces side effects. The A-containing ONS break down with the reluction and inflammation. AAA32313 to AAA35312 represent the mucleotide sequences given in the sequence listing from the present the previously named sequences. SEQ ID NO:1 to 2815, and then the last 185 sequences given in the disclosure of the present invention on N.B. Sequences given in the disclosure of the present invention do not match to with their corresponding SEQ ID NO:1 to 1890 (AAA32323 to AAA32313 to AAA3231 to AAA32313 to AAA3231 to AAA32313 to AAA3231 t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New antisense oligonucleotides useful for treating e.g. pulmonary vasoconstruction, inflammation, allergies, asthma, hypertension, bronchitis, emphysema, respiratory distress syndrome, ischemia or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 18; Page 409; 1343pp; English.

CC The antisense oligonucleotides and (I) can be used to down-regulate the cexpression and or activity of target polypeptides associated with CC lung/respiratory disorders and malignancies, such as stimulating and CC activating peptide factors and transmitters, transcription factors, crownonglobulins and antibodies, antibody receptors, cytokines and CC immunoglobulins and antibodies, antibody receptors, cytokines and CC chemokines, endogenously produced specific and non-specific enzymes, CC binding proteins, adenosine receptors, bradykinin receptors, cytokine and CC receptors, CNS and peripheral nervous and non-nervous system (CNS) and peripheral nervous and non-nervous system peptide CC transmitters, defensins, growth factors, vasoactive peptides and creceptors, binding proteins and malignancy associated proteins. The CC antisense oligonuclectides may be used in this way to treat disorders including respiratory obstruction (especially pulmonary obstruction and/or bronchoconstriction) and/or lung inflammation, allergy(ies) and/or condition selected from pulmonary vasoconstriction, inflammation, condition selected from pulmonary vasoconstriction, inflammation, pulmonary conservation, emphysema, chronic obstructive pulmonary disease (OPD), condition, emphysema, chronic obstructive pulmonary disease (OPD), condition and antisense of the proteins and antisense of the proteins of the proteins and antisense of the proteins of the proteins and antisense of the proteins of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

```
junctions of genes encoding a polypeptide associated with lung and/or casal airway dysfunction and a second active agent comprising an antiinflammatory steroid and ubiquinone. A composition of the invention has antiinflammatory, antialtergic, antiasthmatic, hypotensive, has antiinflammatory, antialtergic, antiasthmatic, hypotensive, and cytostatic activity. The composition may have a use in antisense gene therapy. The composition is useful for treating or preventing a respiratory, lung or malignant disease or condition, also for enhancing the prophylactic or therapeutic respiratory effect of an antiinflammatory steroid in a subject, for reducing or depleting levels of, or reducing sensitivity to adenosine, reducing levels of adenosine receptor, producing bronchodilation, increasing levels of adenosine receptor, producing bronchodilation, increasing levels of adenosine or lung surfactant in a subject's tissue, or treating bronchoconstriction, lung surfactant in a subject's tissue, or respiratory disease or condition. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO

                                                                                                                                                                                                     CC dysfunction or cancer and can be anti-sense to the corresponding mRNA.

CC The invention also describes a kit, that comprises: (a) a delivery

CC device, in separate containers, (b) the oligonucleotides, (c)

CC instructions for adding a carrier and for use of the kit. The composition

CC of the invention has antiallergic, antiinflammatory, antiasthmatic,

CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a

CC beta-adrenergic agonist. The composition is useful for preventing or

CC treating a respiratory, lung or malignant disease. The administered

CC composition comprises oligo and is administered to reduce the production

CC or availability, or to increase the degradation of the target mRNA or to

CC reduce the amount of target polypeptide present in the lungs. The

CC pulmonary obstruction, and/or bronchoconstriction and/or lung

CC inflammation, allergies and/or bronchoconstriction are associated

CC with a disease or condition such as pulmonary vascocnatriction,

CC distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary

CC distress syndrome, pain, cystic fibrosis, allergic rhinitis or cancer.

CC transplantation rejection, pulmonary infections, bronchitis or cancer.

CC thymidines present in the target RNA serves to prevent the breakdown of

CC thymidines present in the target RNA serves to prevent the breakdown of

CC thymidines present in the target that free adenosine into the system

CC conspicition of the anti-sense oligos corresponding to

CC thymidines present in the target that free adenosine into the system

CC conspicute the system

CC conspicute the serves to prevent the breakdown of

CC thymidines present in the target RNA serves to prevent and thereby, to

CC prevent any unwanted effects due to it

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention describes a novel composition (a) a first active agent, comprising oligonucleotides, effective for alleviating bronchoconstriction, respiratory tract inflammation, allergies and reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors, surfactant depletion or hyposecretion, when administered to a mammal. The oligonucleotides are derived from a gene encoding or regulating expression of a target polypeptide associated with lung airway or lung
                                                                                                                                                                       Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 15; SEQ ID NO 10521; 763pp; English

Oligonucleotides were designed to target nucleic acids encoding II-5 and II-5 receptor-alpha. The antisense oligonucleotides may be used for the treatment of diseases associated with II-5 signal transduction, II-5 expression or II-5 receptor-alpha expression. Such diseases include asthma and eosinophilic syndrome. The oligonucleotides are also useful for research uses and to prevent or delay infection, inflammation or tumour formation
The present sequence is an oligonucleotide used for antisense modulation of interleukin-5 (II-5) signal transduction. Oligonucleotides were designed to target nucleic acids encoding II-5 and II-5 receptor-alpha. The antisense oligonucleotides may be used for the treatment of diseases
                                                                                                                                                                                                                                                                                                                                                                                                   Human

                         The present sequence is an oligonucleotide used for antisense modulation of interleukin-5 (IL-5) signal transduction. Oligonucleotides were designed to target nucleic acids encoding IL-5 and IL-5 receptor-alpha. The antisense oligonucleotides may be used for the treatment of diseases associated with IL-5 signal transduction, IL-5 expression or IL-5 receptor-alpha expression. Such diseases include asthma and eosinophilic syndrome. The oligonucleotides are also useful for research uses and to prevent or delay infection, inflammation or tumour formation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      associated with IL-5 signal transduction, IL-5 expression or IL-5 receptor-alpha expression. Such diseases include asthma and eosif syndrome. The oligonucleotides are also useful for research uses prevent or delay infection, inflammation or tumour formation

                                                                                                                                                                                                                                                                                                                                                 present invention provides the protein and coding sequences of the ine interleukin-5 (IL-5) protein. This can be used to treat allergies cer and inflammatory reactions in dogs. The present sequence is a PCR mer used to obtain the sequences of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   interleukin-5; IL-5; allergy; cancer;
ammatory reaction; PCR primer; 88.

                                                                                                                                                                                        Query Match
                                                                                                                                                                                                                                                      versus soluble form of IL-5 receptor a. The antisense compound is useful for modulating IL-5 signal transduction, modulating expression of mammalian IL-5 or modulating the expression of mammalian IL-5 receptor a, in cells or tissues, for altering the ratio of the isoforms of mammalian IL-5 receptor a in mammalian cells or tissues, treating a mammalian having a disease or condition associated with IL-5 signal transduction, IL-5 expression or IL-5 receptor a expression, where the disease or condition include eosinophilic syndrome or asthma. An antisense compound which alters splicing of an RNA encoding IL-5 receptor a is also useful for treating a mammal having a disease or condition. The present sequence is an antisense oligonucleotide targetting human IL5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (DEAN/) DEAN N M.

The antisense compound is useful for modulating IL-5 signal transduction, modulating expression of mammalian IL-5 or modulating the expression of mammalian IL-5 receptor a letring the expression of mammalian IL-5 receptor a letring the ratio of the isoforms of mammalian IL-5 receptor a in mammalian cells or tissues, treating a mammalian IL-5 receptor a repression, where the disease or condition include eosinophilic syndrome or asthma. An antisense compound which alters splicing of an RNA encoding IL-5 receptor a is also useful for treating a mammal having a disease or condition. The present sequence is an antisense content of the stargetting human IL-5 receptor a sequence is an antisense content of the stargetting human IL-5 receptor a sequence is an antisense content of the stargetting human IL-5 receptor a sequence is an antisense content of the stargetting human IL-5 receptor a sequence is an antisense or condition. The present sequence

The antisense compound is useful for modulating IL-5 signal transduction, modulating expression of mammalian IL-5 or modulating the expression of mammalian IL-5 receptor a, in cells or tissues, for altering the ratio of the isoforms of mammalian IL-5 receptor a in mammalian cells or tissues, treating a mammalian having a disease or condition associated with IL-5 signal transduction, IL-5 expression or IL-5 receptor a expression, where the disease or condition include eosinophilic syndrome or asthma. An antisense compound which alters splicing of an RNA encoding IL-5 receptor a is also useful for treating a mammal having a disease or condition. The present sequence is an antisense oligonucleotide targetting mouse IL5

Altering the ratio of the isoforms of mammalian IL-5 receptor a in mammalian cells or CC tissues comprises contacting the cells or tissues with an antisense CC compound so that the ratio of the mammalian IL-5 receptor a isoforms is altered. Treating a mammal having a disease or condition associated with CC IL-5 signal transduction or IL-5 or IL-5 receptor a expression, or a CC disease or condition characterised by a reduction in apoptosis comprises administering to the mammal a therapeutic or prophylactic amount of an CC antisense compound so that IL-5 signal transduction, IL-5 or 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

```
CC II-5 or II-5 receptor a, where the antisense compound modulates the CC expression of mammalian II-5 or II-5 receptor a. The antisense CC oligonuclectide comprises at least one modified internucleoside linkage, CC i.e. a phosphorothicate linkage, or a peptide nucleic acid, at least one modified sugar moiety, i.e. a 2'-O-methoxyethyl sugar moiety, and at CC least one modified nucleobase, i.e. 5-methylcytosine. Altering the ratio of the isoforms of mammalian II-5 receptor a in mammalian cells or CC tissues comprises contacting the cells or tissues with an antisense CC compound so that the ratio of the mammalian II-5 receptor a isoforms is CC altered. Treating a mammal having a disease or condition associated with CC II-5 signal transduction or II-5 or II-5 receptor a expression, or a cCC disease or condition characterised by a reduction in apoptosis comprises administering to the mammal a therapeutic or prophylactic amount of an antisense compound so that II-5 signal transduction, II-5 or II-5 creceptor a isoforms is altered, or expression of membrane II-5 receptor a isoforms is altered, or expression of membrane II-5 receptor a isoforms is altered, or expression of membrane II-5 receptor a sentisense compounds, methods and compositions are cuseful in promoting apoptosis and in treating eosinophilic syndrome and contacting of the invariance of the invariance
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New antisense compound modulating useful in promoting apoptosis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   -5 (IL-5) signal transduction.
oligonucleotide targeted to a r
                                                              oligonucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to an antisense compound that modulates interleukin

Altering the ratio of the isoforms of mammalian IL-5 receptor a in mammalian cells or tissues comprises contacting the cells or tissues with an antisense compound so that the ratio of the mammalian IL-5 receptor a isoforms is altered. Treating a mammal having a disease or condition associated with IL-5 signal transduction or IL-5 or IL-5 receptor a expression, or a disease or condition characterised by a reduction in apoptosis comprises administering to the mammal a therapeutic or prophylactic amount of an antisense compound so that IL-5 signal transduction, IL-5 or IL-5 receptor a expression, or IL-5 receptor a is modulated, the ratio of IL-5 receptor a is signal transduction in a poptosis comprises at a soforms is altered, or expression of membrane IL-5 receptor a is modulated.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        oligonucleotide targeted to a nucleic acid molecule encoding a mammaliar II-5 or II-5 receptor a, where the antisense compound modulates the expression of mammalian II-5 or II-5 receptor a. The antisense oligonucleotide comprises at least one modified internucleoside linkage,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     is modulated. The antisense compounds, methods and compositions are useful in promoting apoptosis and in treating eosinophilic syndrome and asthma. This sequence represents a human IL-5 DNA antisense
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to an antisense compound that modulates interleukin -5 (IL-5) signal transduction. The antisense compound is an antisense
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (KARR/)
(MCKA/)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        oligonucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New antisense compound modulating useful in promoting apoptosis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Dean
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 (MANO/)
                                                                                                                                                                                                                                                                                                                                                                                                              2416

                                                                                                                                                                                                                                     CC The present sequence represents a preferred target sequence for an CC enzymatic nucleic acid (i.e. a ribozyme) which cleaves interleukin-5 (II-5) mRNA at the nucleotide base position indicated in the DE line. Regions CC of the mRNA that do not form secondary folding structures and that CC contain potential hammerhead and hairpin ribozyme cleavage sites were CC identified by computer analysis. Ribozymes directed against these mRNA CC sequences were designed and synthesised with modifications that improve their nuclease resistance. The ribozymes cleave the II-5 target sequences CC and thereby inhibit II-5 expression, making them useful for treating CC chronic asthma, e.g. by inhibiting the synthesis of II-5 in lymphocytes CC and preventing the recruitment and activation of eosinophils. The CC ribozymes can also be used to treat eosinophilia (related to parasitic CC infection or with pulmonary infiltration) and I-tryptophan-associated CC eosinophilia-myalgia syndrome. (Updated on 25-MAR-2003 to correct PI CC field.)

Ribozymes having modified bases and in inhibiting disease related genes genes. methods for producing them for

Claim <u>ب</u> Page 222; 407pp; English.

The present sequence represents a preferred target sequence for an enzymatic nucleic acid (i.e. a ribozyme) which cleaves interleukin-5 (IL-5) mRNA at the nucleotide base position indicated in the DE line. Regions of the mRNA that do not form secondary folding structures and that contain potential hammerhead and hairpin ribozyme cleavage sites were identified by computer analysis. Ribozymes directed against these mRNA sequences were designed and synthesised with modifications that improve their nuclease resistance. The ribozymes cleave the IL-5 target sequences and thereby inhibit IL-5 expression, making them useful for treating chronic asthma, e.g. by inhibiting the synthesis of IL-5 in lymphocytes

                                                                                                                                         The present sequence represents a preferred target sequence for an enzymatic nucleic acid (i.e. a ribozyme) which cleaves interleukin-5 (IL-5) mRNA at the nucleotide base position indicated in the DE line. Regions of the mRNA that do not form secondary folding structures and that contain potential hammerhead and hairpin ribozyme cleavage sites were identified by computer analysis. Ribozymes directed against these mRNA sequences were designed and synthesised with modifications that improve their nuclease resistance. The ribozymes cleave the IL-5 target sequences and thereby inhibit IL-5 expression, making them useful for treating chronic asthma, e.g. by inhibiting the synthesis of IL-5 in lymphocytes and preventing the recruitment and activation of eosinophils. The ribozymes can also be used to treat eosinophila (related to parasitic infection or with pulmonary infiltration) and L-tryptophan-associated eosinophilia and proventing the synthesis of II-5 in lymphocytes in lymphocytes are ribozymes can also be used to treat eosinophila (related to parasitic infection or with pulmonary infiltration) and L-tryptophan-associated eosinophilia and proventing the synthesis of II-5 in lymphocytes in lymphocytes and preventing the synthesis of II-5 in lymphocytes and preventing the recruitment and activation of eosinophila.                                                                                                                                   The present sequence represents a preferred target sequence for an enzymatic nucleic acid (i.e. a ribozyme) which cleaves interleukin-5 (IL-5) mRNA at the nucleotide base position indicated in the DE line. Regions of the mRNA that do not form secondary folding structures and that contain potential hammerhead and hairpin ribozyme cleavage sites were identified by computer analysis. Ribozymes directed against these mRNA sequences were designed and synthesised with modifications that improve their nuclease resistance. The ribozymes cleave the IL-5 target sequences and thereby inhibit IL-5 expression, making them useful for treating chronic asthma, e.g. by inhibiting the synthesis of IL-5 in lymphocytes and preventing the recruitment and activation of eosinophils. The ribozymes can also be used to treat eosinophila (related to parasitic infection or with pulmonary infiltration) and L-tryptophan-associated eosinophilia-myalgia syndrome. The present sequence is an antisense oligonucleotide HUMIL5AS3 specific for the human IL5. The method can be used to treat airway diseases such as cystic fibrosis, asthma, chronic obstructive pulmonary disease, bronchitis and other airway diseases characterised by an inflammatory response. By eliminating adenosine from the antisense ON, its liberation upon antisense degradation is prevented, thereby preventing adenosine-induced bronchoconstriction in patients with hyperreactive airways
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Nyce

The present sequence is an antisense oligonucleotide HUMIL5ASI specific for the human IL5. The method can be used to treat airway diseases such as cystic fibrosis, asthma, chronic obstructive pulmonary disease, bronchitis and other airway diseases characterised by an inflammatory response. By eliminating adenosine from the antisense ON, its liberation upon antisense degradation is prevented, thereby preventing adenosine-induced bronchoconstriction in patients with hyperreactive airways

codons, genomic flanking regions, intron-exon borders, the 5'-end, the 3' codons, genomic flanking regions, intron-exon borders, the 5'-end, the 3' cend and the juxta-section between coding and non-coding regions and all conditions or mixtures. The antisense oligonucleotides may be derived from sequences AAX55272-74. These multiple target oligonucleotides (specifically AAX55180-271) can be used for the antisense treatment of diseases and conditions. Typical diseases and conditions are those associated with impaired respiration and inflammation, including lung diseases, pulmonary vasoconstriction, inflammation, including lung diseases, pulmonary vasoconstriction, inflammation, respiratory disease syndrome, pain, cystic fibrosis, pulmonary hyperrension, colon cancer, band cancers such as leukemias, lymphomas, carcinomas e.g. colon cancer, breast cancer, lung cancer, pancreatic cancer, colon cancer, breast cancer, lung cancer, pancreatic cancer, as all types of cancers which may metastasize or have metastasized to the lungs, including breast and prostate cancer

e.g. ischaemic conditions, pulmonary vasoconstriction, allergies, asthingeded respiration, respiratory distress syndrome, pain, cystic fibrosis, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease (COPD), and cancers such as leukaemias, lymphomas, carcinomas, and cancers which may metastasise to the lungs, including breast and prostate cancer. The reduction of the adenosine content of ONs reduces side effects. The A-containing ONs break down with the release of deoxyadenosine which activates adenosine receptors causing bronchoconstriction and infiammation. AAA32313 to AAA35312 represent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      oligonucleotide (ON) with low adenosine (up to 15%), which targets nucleic acids involved in bronchoconstriction, allergies, and/or inflammation. The ON can have antinflammatory, antiallergic, antiasthmatic, cytostatic and analgesic activities. The compositions are useful for the treatment of diseases associated with inflammation, impaired airways, including lung disease and diseases whose secondary effects afflict the lungs of a subject. They can be used for treating
                                                                        nucleotide sequences given in the sequence listing from the present invention, which correspond to SEQ ID NO:1 to 2815, and then the last 185 sequences are also called SEQ ID NO:1 to 185, but the sequences differ from the previously named sequences. SEQ ID NO:11 to 1680 (AAA32323 to AAA3392) are specifically claimed ONs from the present invention. N.B. Sequences given in the disclosure of the present invention do not match up with their corresponding SEQ ID NO: sequences given in the sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New antisense oligonucleotides useful for treating e.g. pulmonary vasoconstruction, inflammation, allergies, asthma, hypertension, bronchitis, emphysema, respiratory distress syndrome, ischemia or

and respiratory obstructions.

CC lung/respiratory disorders and malignancies, such as stimulating and CC activating peptide factors and transmitters, transcription factors, cc immunoglobulins and antibodies, antibody receptors, cytokines and CC chemokines, endogenously produced specific and non-specific enzymes, binding proteins, adhesion molecules and their receptors, cytokine and CC chemokine receptors, adenosine receptors, bradykinin receptors, central CC nervous system (CNS) and peripheral nervous and non-nervous system peptide receptors, binding proteins and malignancy associated proteins. The CC transmitters defensins, growth factors, vasocative peptides and CC receptors, binding proteins and malignancy associated proteins. The CC antisense oligonucleotides may be used in this way to treat disorders including respiratory obstruction (especially pulmonary obstruction and/or lung inflammation, allergy(ies) and/or surfactant hypoproduction which are associated with a disease or CC condition selected from pulmonary vasoconstriction, inflammation, CC allergies, asthma, impeded respiration, respiratory distress syndrome (RDS), pain, cystic fibrosis (CF), allergic rhinitis (AR), pulmonary transplanteation rejection, pulmonary disease (COPD), CC pulmonary transplanteation rejection, pulmonary disease (COPD), and/or cancer. AAP18434 to AAF21543 represent human polynucleotide condition of the present invention of the present human polynucleotide. oligonucleotides and compositions (I) comprising them. In the antisense oligonucleotides the A is replaced by a 'Universal' or alternative base (I) can have respiratory, bronchodilator, antiinflammatory, analyssic, immunosuppressive, antiasthmatic, hypotensive and cytostatic activities. The antisense oligonucleotides and (I) can be used to down-regulate the expression and or activity of target polypeptides associated with The present invention describes low adenosine invention (A) content antisense ing them. In the antisense

                                                                                hybrid molecules, detecting amplified products and comparing the amplified products from each sample to identify distinctive amplified products coding for at least one secreted or transmembrane protein. The method is useful for discovering novel secreted and/or transmembrane proteins which are important for cell processes and play an important role in determining its phenotype, and which act as mediators for the transfer of signals from external environment into the cell itself, thus modulating gene expression. Sequences ABX03792-ABX03869 represent DNA encoding the control of the cont
                                                                                                                                                                                                                                                                                                                                                           The invention relates to a differential display comprising contacting cDNA with a first primer that hybridises to an oligonucleic sequence coding for a leucine-rich motif, and with a second oligonucleotide primer to form a cDNA-hybrid molecule. The method comprises obtaining mRNA from at least 2 samples, synthesising cDNA from the RNA of each sample, contacting the cDNA with a first primer that hybridises to an oligonucleotide primer to form cDNA-hybrid molecules, amplifying the cDNA bybrid molecules, amplifying the cDNA bybrid molecules, amplifying the cDNA bybrid molecules.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Differential display method for identifying secreted or transmembrane protein, comprises contacting a DNA with a first primer that hybridize to a sequence coding for a leucine-rich motif and with a second
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   oligonucleotide primer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     WPI; 2002-599769/64.

                                                                                                                                                                                       The invention relates to a novel pharmaceutical composition, which has a CC first active agent comprising an oligonucleotide antisense to the CC initiation codon, coding region, 5' or 3' end genomic flanking regions, CC 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of CC junctions of genes encoding a polypeptide associated with lung and/or CC nasal airway dysfunction and a second active agent comprising an CC antiinflammatory steroid and ubiquinone. A composition of the invention CC immunosuppressive, and cytostatic activity. The composition may have a CC use in antisense gene therapy. The composition is useful for treating or preventing a respiratory, lung or malignant disease or condition, also CC for enhancing the prophylactic or therapeutic respiratory effect of an CC antiinflammatory steroid in a subject, for reducing levels of adenosine creceptor, producing bronchodilation, increasing levels of ubiquinone or lung surfactant in a subject tissue, or treating bronchocomstriction, CC lung inflammation, lung allargies, or a respiratory disease or condition. CC specification, but was obtained in electronic format directly from WIPO Cat firm, wino, inframblehad not segmences.

                                                                                                                                                                                                                                                                                                 first active agent comprising an oligonucleotide antisense to the initiation codon, coding region, 5' or 3' end genomic flanking regions, 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of junctions of genes encoding a polypeptide associated with lung and/or nasal airway dysfunction and a second active agent comprising an artisinflammatory steroid and ubiquinone. A composition of the invention has antiinflammatory, antiallergic, antiasthmatic, hypotensive, and cytostatic activity. The composition may have a use in antisense gene therapy. The composition is useful for treating or preventing a respiratory, lung or malignant disease or condition, also for enhancing the prophylactic or therapeutic respiratory effect of an antiinflammatory steroid in a subject, for reducing or depleting levels of, or reducing sensitivity to adenosine, reducing levels of adenosine receptor, producing bronchodilation, increasing levels of adenosine of, or guirding mation, but was obtained in electronic format disease or condition.

Note: The sequence data for this patent is not represented in the printed specification, but was obtained for seminance.

                                     CC oligonucleotides are derived from a gene encoding or regulating dysfunction of a target polypeptide associated with lung airway or lung CC dysfunction or cancer and can be anti-sense to the corresponding mRNA. CC The invention also describes a kit, that comprises: (a) a delivery CC device, in separate containers, (b) the oligonucleotides, (c) instructions for adding a carrier and for use of the kit. The composition of the invention has antiallergic, antiinflammatory, antiasthmatic, analgesic, hypotensive, immunosuppressive and cytostatic activity, is a CC beta-adrenergic agonist. The composition is useful for preventing or treating a respiratory, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the production of activity, or to increase the degradation of the target mRNA or to reduce the amount of target polypeptide present in the lungs. The CC pulmonary obstruction, and/or bronchoconstriction and/or lung inflammation, allergies and/or surfactant hypoproduction are associated with a disease or condition such as pulmonary vasoconstriction, coligonary condition, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary transplantation rejection, pulmonary infections, bronchitis or cancer. The reduced adenosine content of the anti-sense oligos corresponding to thymidines present in the target RNA serves to prevent the breakdown of the oligonucleotides into products that free adenosine into the system e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to prevent any unwanted effects due to it
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention describes a novel composition (a) a first active agent comprising oligonucleotides, effective for alleviating bronchoconstriction, respiratory tract inflammation, allergies and reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors of the property of the composition of the property of the property of the composition of the compos
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 15; SEQ ID NO 10518; 763pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Pharmaceutical composition for treating asthma, has antisense oligonucleotide containing less percentage of adenosine, targeted nucleic acids associated with lung airway or lung dysfunction, and

---mal. The

comprising oligonuclectides, effective for alleviating to bronchoconstriction, respiratory tract inflammation, allergies and creducing adenosine (A) or (A) receptors, reducing adenosine (A) or (A) receptors, constructed to a mammal. The coligonuclectides are derived from a gene encoding or regulating conjugation of a target polypoptide associated with lung airway or lung compression of a target polypoptide associated with lung airway or lung dyfunction or cancer and can be anti-sense to the corresponding mRNA. The invention also describes a kit, that comprises: (a) a delivery constitution also describes a kit, that comprises: (a) a delivery constitution also describes a kit, that comprises: (a) a delivery constitution and containers, (b) the oligonuclectides, (c) instructions for adding a carrier and for use of the kit. The composition of the invention has antiallersic, antinflammatory, antiasthmatic, analyses of the invention or the invention and in a definition is useful for preventing or the beta-adrenergic agonist. The composition is useful for preventing or the treating a respiratory, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypoptide present in the lungs. The

Pharmaceutical composition for treating asthma, has antisense oligonucleotide containing less percentage of adenosine, targe nucleic acids associated with lung airway or lung dysfunction,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           inflammation, allergies and/or surfactant hypoproduction are associated with a disease or condition such as pulmonary vasoconstriction, inflammation, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary transplantation rejection, pulmonary infections, bronchitis or cancer. The reduced adenosine content of the anti-sense oligos corresponding to thymidines present in the target RNA serves to prevent the breakdown of the oligonuclectides into products that free adenosine into the system e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to
                The present sequence is the human interleukin-5 (hIL-5) promoter mutant palindromic regulatory element (PRE1-4), which inhibits the activity of the hIL-5 promoter and therefore IL-5 expression. PRE1-4 can be used to modulate IL-5 activity by acting on the corresponding region of the hIL-promoter, especially in cases of asthma and eosinophila or in immunocompromised subjects. PRE1-4 specifically inhibits transcription from the IL-5 promoter, as no such sequence is present in genes encoding
                                                                                                                                                                                                                                                                                                                Nucleic acid sequence that inhibits activity of the interleukin-5 promoter - and proteins that interact with this sequence to modulate IL-5 gene expression, for treating asthma, eosinophilia or immune-compromised
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 18
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Homo sapiens
